

New England College Colloquium:

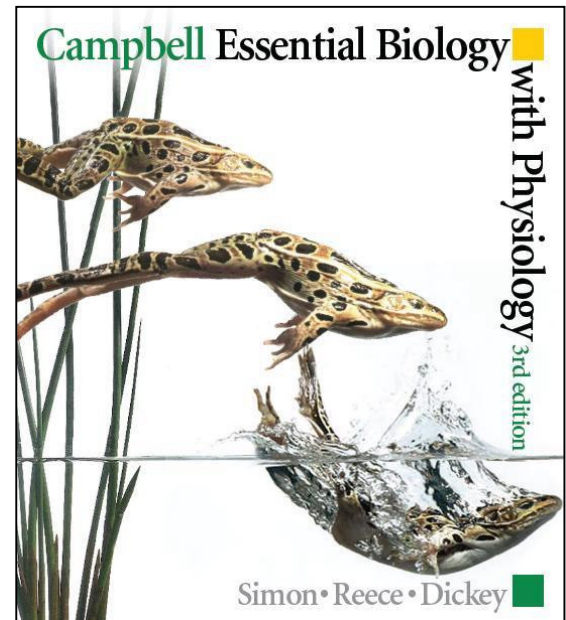

USING MULTIPLE MEDIA TO ENGAGE STUDENTS

Professor Eric Simon

CEI Bldg. Room 202

Friday 6 November 12:30pm

Abstract: During my sabbatical, I explored various ways that core content can be communicated to students. Focusing on non-major students in general education biology courses, I gathered data on student use of technology and the difficulties that faculty members face in such courses. In response, I attempted to address identified needs through a new edition textbook and various multimedia supplements. In this talk, I will present data on student attitudes toward technology, the new products implemented in response to these attitudes, and some efficacy data.

Students, Faculty, & staff are encouraged to attend
